

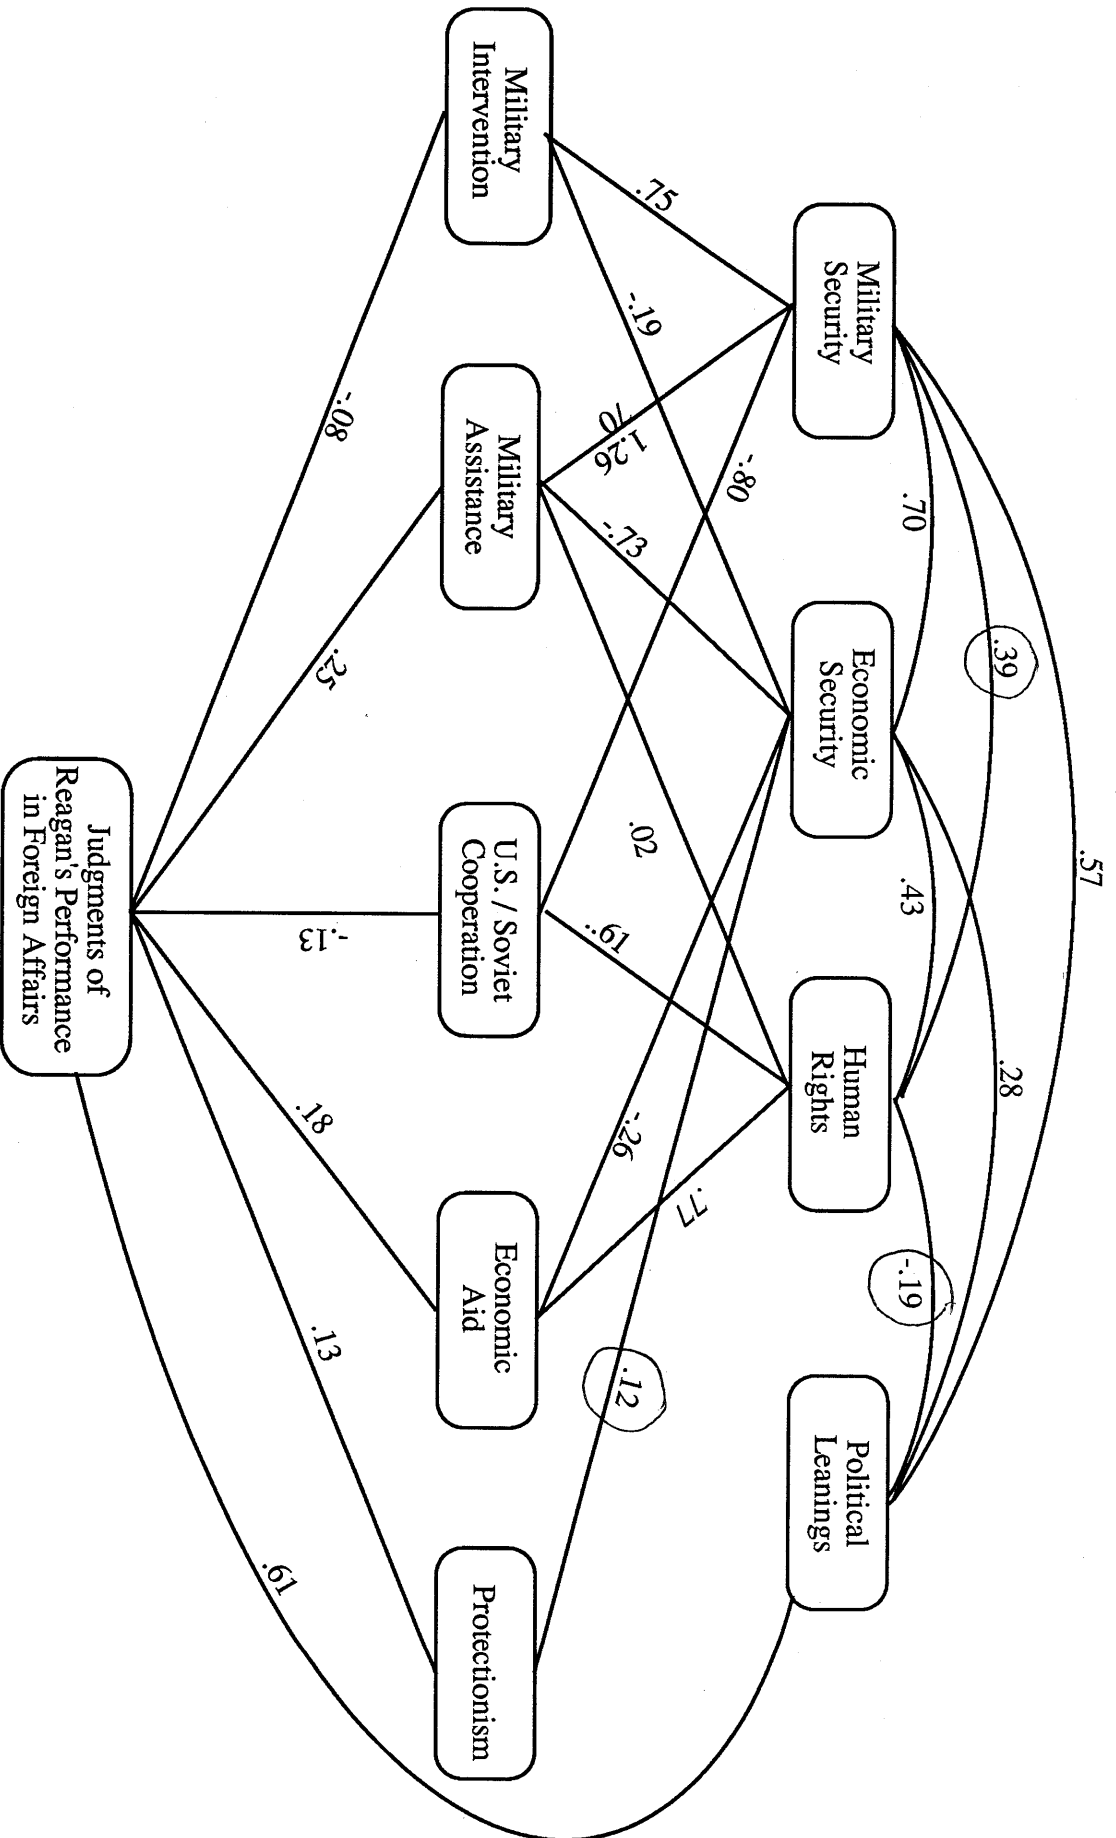

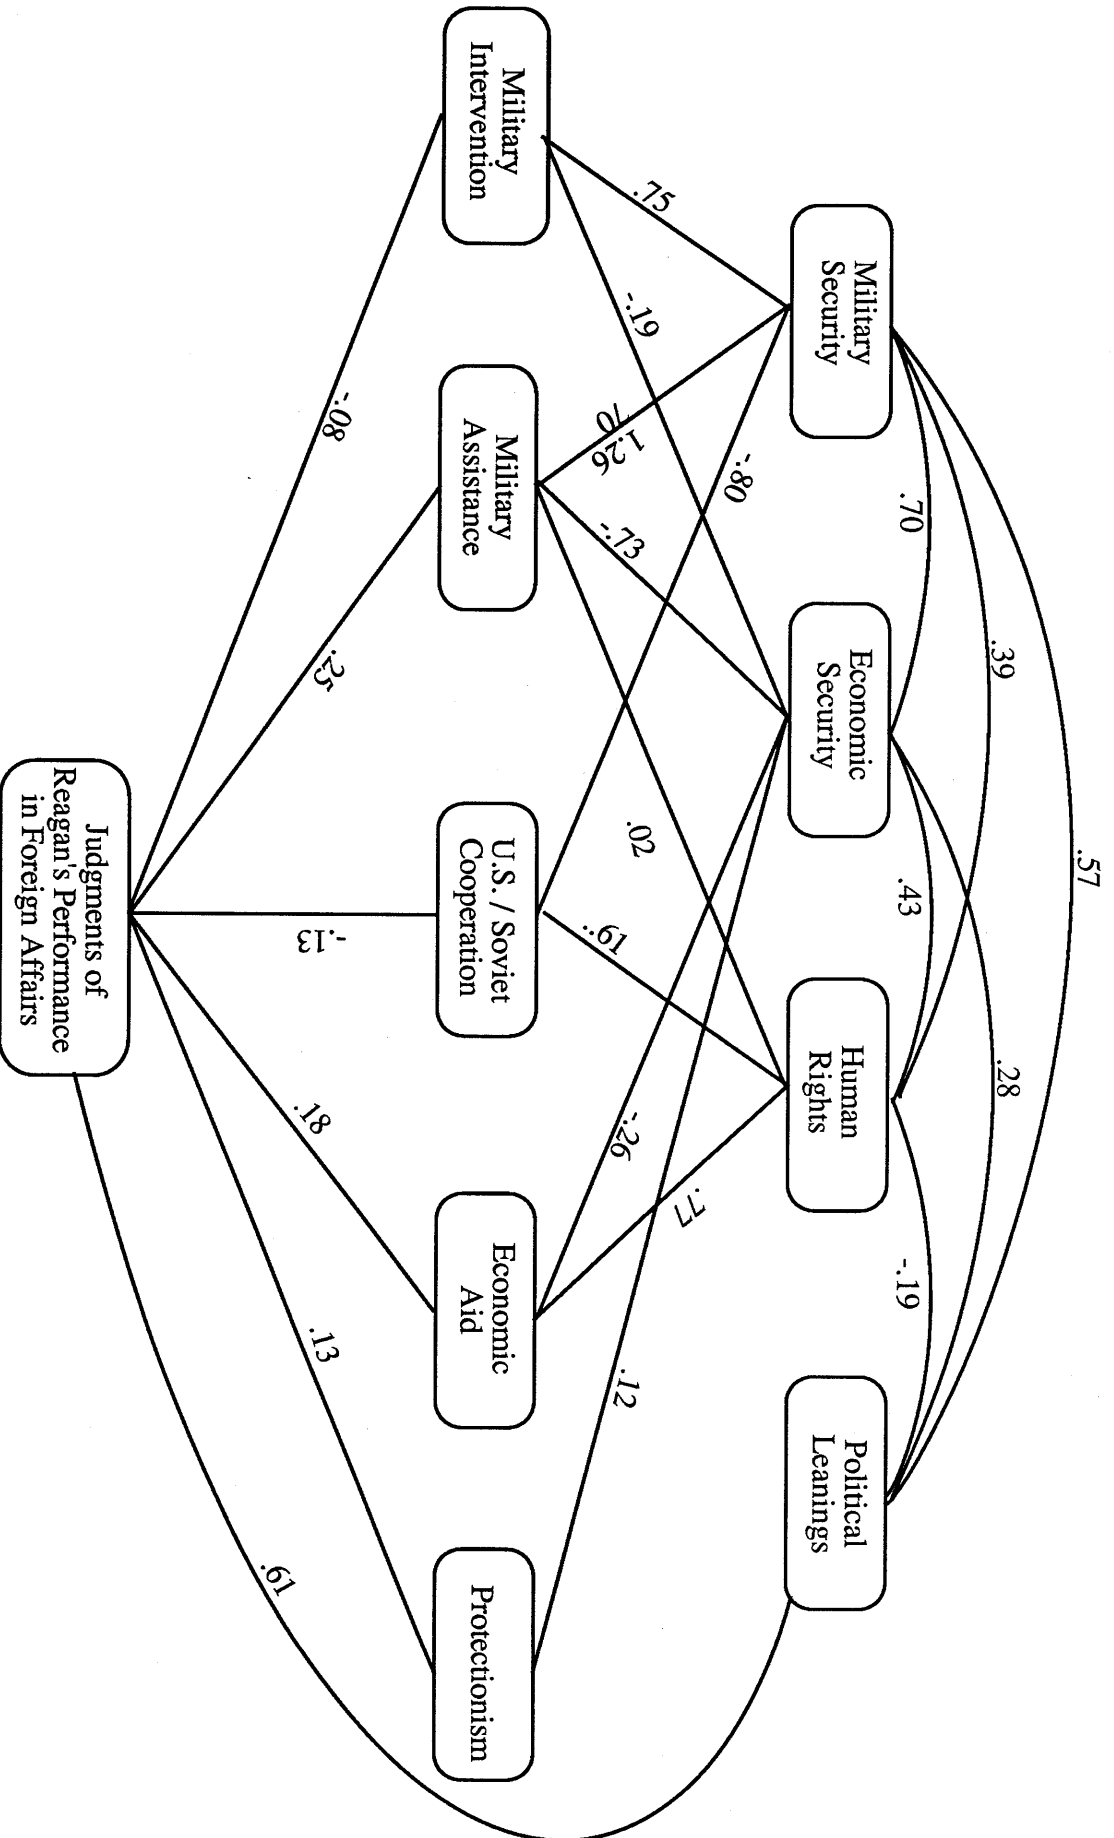

Figure 1: Hierarchical Model of Foreign Policy Beliefs: Cross-Sectional Sample

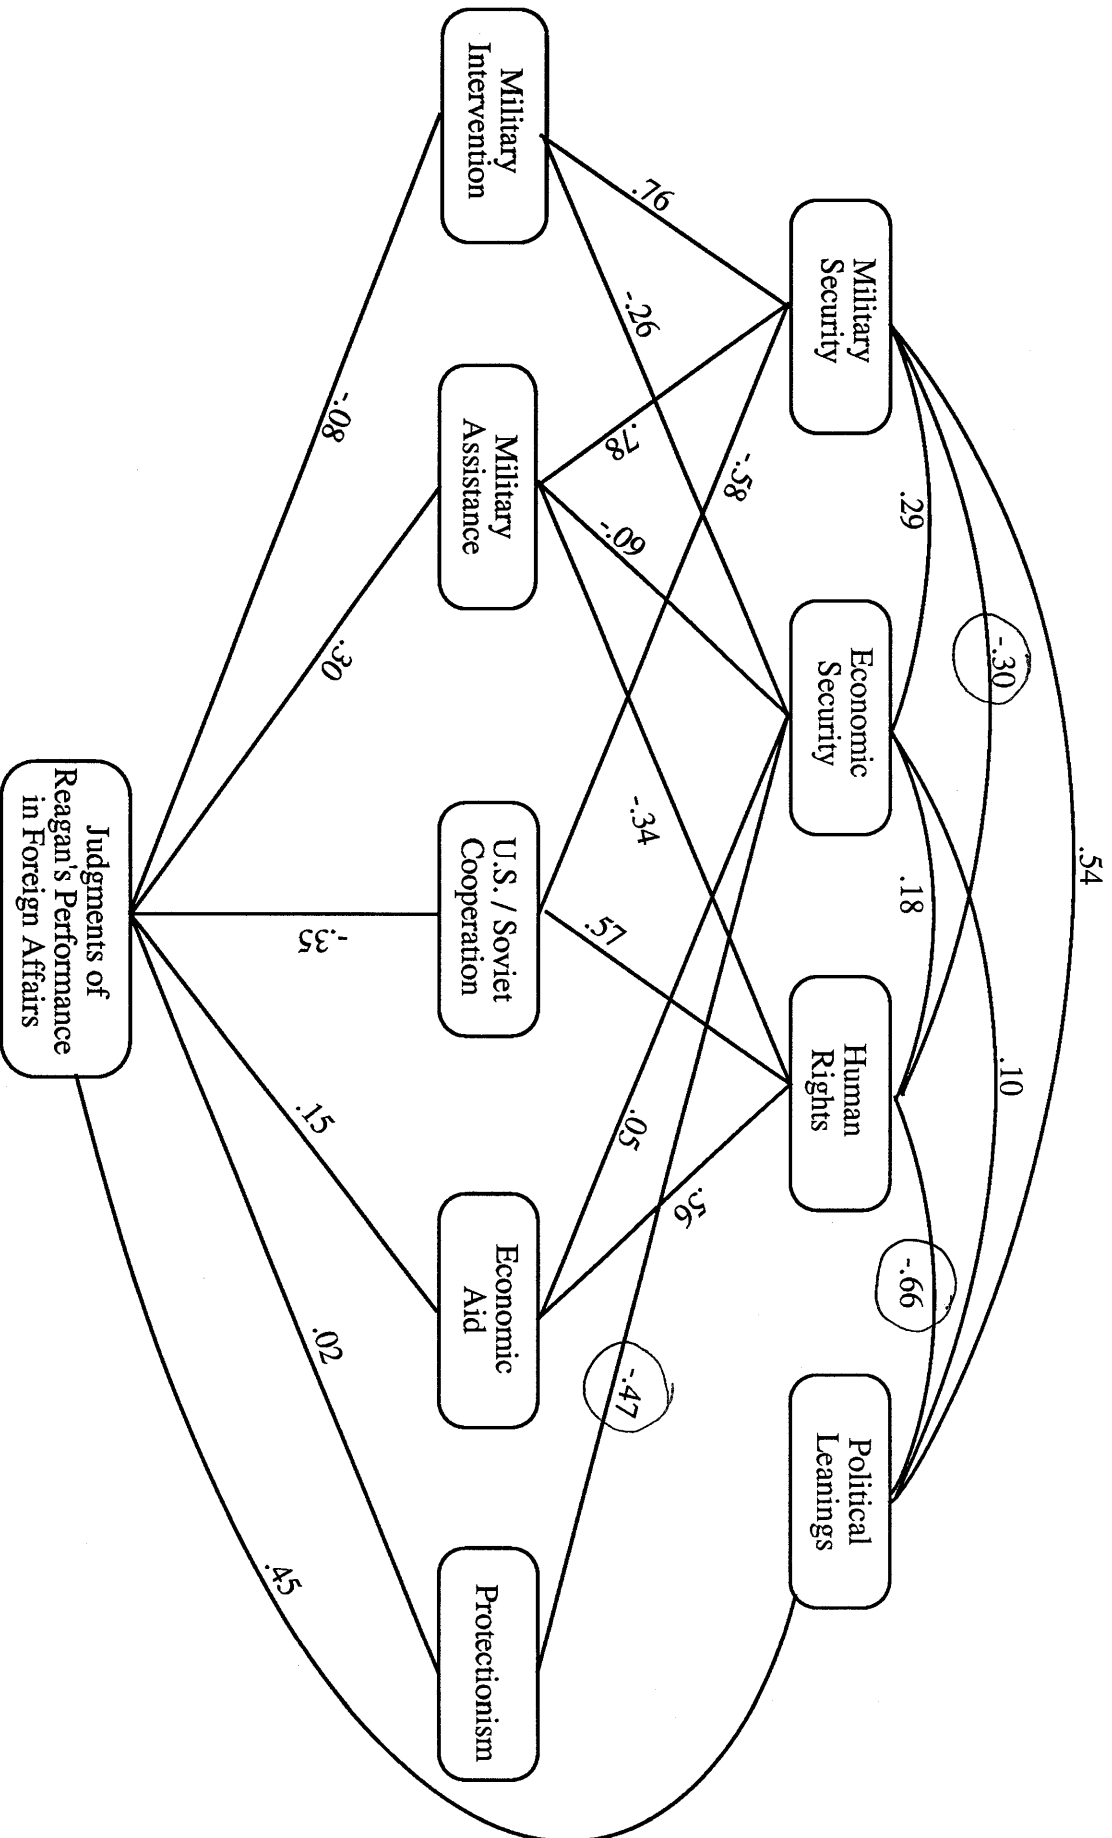

Total Coefficient of Determination for X-Variables = .93
 Total Coefficient of Determination for Structural Equations = .97
 Adjusted Goodness of Fit = .92

Figure 2: Hierarchical Model of Foreign Policy Beliefs: Cross-Sectional Sample

Total Coefficient of Determination for X-Variables = .93
 Total Coefficient of Determination for Structural Equations = .97
 Adjusted Goodness of Fit = .92

Figure 3: Hierarchical Model of Foreign Policy Beliefs: Elites

Total Coefficient of Determination for X-Variables = .99
 Total Coefficient of Determination for Structural Equations = .98
 Adjusted Goodness of Fit = .92
